Knight's
BOOK on
 Small Fruits

1880 DAVID KNIGHT & SON 1915
 SAWYER, MICHIGAN

READ THIS GENERAL INFORMATION VERY CAREFULLY

REFERENCES.

For our reliability we refer you to The American National Bank and the Berrien County Bank, both of Benton Harbor, Mich., Dun's or Bradstreet's Commercial Report, or to the Express Agent or any business man of Sawyer.

TERMS.

Cash with order or part cash when order is sent and the balance before shipment.

REMITTANCES.

Send money by check, draft, post office money order, express money order, or registered mail. Currency sent in a letter without registering is at sender's risk.

HOW TO ORDER.

Please use order sheet found in this catalog, being sure to write your name and address plainly, and fill out all blanks carefully with reference to where you want your plants shipped, whether you want them sent by express, freight or mail, and at what time.

HOW TO SHIP.

Express is much the safer way, and as there is a general special rate applied to nursery stock the cost is not exorbitant. We guarantee express shipments to reach destination in good condition. Raspberry, blackberry and other heavy plants can be shipped safely by freight early in the season and considerable transportation charges saved thereby. However, all freight shipments go at consignee's risk.

PARCELS POST.

The Parcels Post Law now includes plants, so that fairly good sized orders can now be sent by mail at a reasonable expense. For instance 100 strawberry plants can be sent anywhere in the 1st zone for about 7c; 2nd zone, 7c; 3rd zone, 10c; 4th zone, 15c; 5th zone, 20c; 6th zone, 25c; 7th zone, 31c; 8th zone, 36c. We cannot give you a very close estimate on raspberry and blackberry plants as they vary so much in weight. Plants can now be sent C. O. D., both for cost of plants and postage. However, this costs you more for return of money.

ORDER EARLY.

By all means do not delay placing your orders until you are ready to plant. The earlier orders are placed the better it is for you and for us. All orders are booked in rotation as received, therefore it is to your advantage to get your order placed early before varieties you wish are gone.

GUARANTEE.

We are very careful to label, count and pack our plants correctly, and we assume the responsibility of replacing, free of charge, any stock sent by us that proves untrue to label or short in count; however, it is understood between the purchaser and ourselves that we are not to be held liable for any greater sum than that paid for such stock as may prove untrue to label.

COMPLAINTS.

Complaints, if any, must be made within ten days after receipt of stock. We are always glad to adjust errors.

SHIPPING SEASON.

Commences about March 1st and continues until about May 15th.

Superb Fall Bearing

FALL BEARING STRAWBERRIES

Do not, under any circumstances, let another year pass without setting out a good sized patch of these wonderful berries. You have probably hesitated before, as a good many new things have been lauded highly, but in actual use have proven worthless. However, this is not the case with the Fall Bearing Strawberries. We have grown them now for four years. Commencing with a few dozen plants we have increased our acreage every year until this season we have several hundred thousand plants to offer. And berries! Say, we surprised the natives last fall. We kept the blossoms all picked off until the 1st of August, and by the last week in that month we commenced to pick berries and kept picking every day until the ground was frozen hard. The last crate was picked and shipped on the 13th day of November. A grocery firm in Benton Harbor, a nearby city, took all the fruit we could spare after supplying our home market, and paid us 25c per quart for it. That's a mighty good price for berries, isn't it? But they were worth it. Great big luscious fellows—they are the talk of every man, woman and child in the community, and unless we are mistaken our local trade will take a good share of our plants this season, for now that people are convinced, they are anxious to get a start of this wonderful fruit.

The Superb is far superior to all of the others in our estimation. It is more prolific, the fruit is larger and of better quality, and it is so strong and hardy that after bearing a good crop of fruit in the fall of the first year planted it will come along the following spring and produce as large a crop as any of the spring sorts.

The price of Fall Bearing plants in the past has been rather prohibitive, but this year we are making them within the reach of all, and you surely cannot afford to be without them for, outside of the labor of keeping the blossoms off the first year, the care of them is no different than that given the spring sorts, and the returns they will give you the first year alone will be worth ten times the money and labor expended on them.

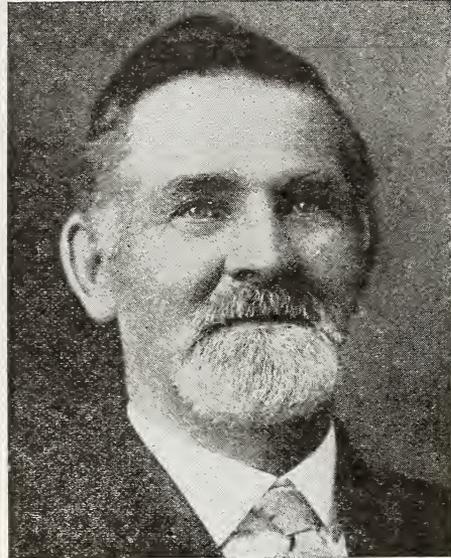

VISITING PAGE

ONCE more your thoughts and ours are traveling in much the same direction. During all but the spring months our thoughts may diverge.—War—Politics—Local Affairs—Harvesting and Marketing of Crops—may occupy our attention to a greater or less degree; but as the spring months come nearer our

minds all turn to the one thought—“PLANTING.”—What to plant.—Where to plant it.—How large an acreage.—Of whom to purchase the plants, etc., etc. The man who has plants to buy and the man who has plants to sell are thus brought closer together than at any other time during the year. This then is the time when plant catalogs are welcomed in your homes. It is certainly the opportune time for this issue of our catalog to reach you and we surely will appreciate your reading it over very carefully, for if you are not already a customer of ours we want you to be this year. It is not a selfish motive that prompts us to make this statement, for we know we have the kind and quality of plants that you need

DAVID KNIGHT

and that an order placed for KNIGHT'S PLANTS, while being appreciated by us, will surely prove profitable to you, so that we will be mutually beneficial to each other.

A. R. KNIGHT

For over thirty years we have been living in this little town in the heart of one of the finest fruit sections that God's sun ever shone on. For all that length of time we have been growing and shipping small fruit plants. Every year has seen an increase in our business over the year previous. Could we have done this, could any firm do it, if they didn't give an honest dollar's worth of goods for every dollar received? No, indeed. Their business career would have been ended and their names forgotten years ago. Friends, there is much more than appears on the surface in the name that one establishes for himself. Of course, in doing a large business it is impossible to please every one and it is probable that some have a real or supposed grievance against us, but KNIGHT'S PLANTS are known in nearly every part of the United States where small fruits are grown, and we will venture to say that 99 per cent of the men and women of KNIGHT'S PLANTS AS GOOD

who are interested in small fruits think

SMALL

RESIDENCE OF A. R. KNIGHT.

(One of the results of growing good plants.)

PLANTS. We feel justified in saying this by the hundreds of testimonial letters that we receive every year and by the fact that customers who bought plants of us twenty and even thirty years ago are still sending us their orders.

For this reason we have the right to believe that our name is established, and well established in the plant world, but we do not presume from that fact that we would be warranted in charging you exorbitant prices for our stock. It is still our custom, as it always has been, to make our prices as low as good plants can be sold for, and it naturally follows that you cannot afford to buy at a lower price, nor is there any sense in paying a higher price.

Whether you are an old, new, or prospective customer, we want your patronage this season, for in all probability we can save you on the initial cost of your stock, and we certainly can, and will ship you stock that will prove more profitable to you than that grown in any other section of the country. The superiority and hardiness of our plants is due, in a large degree, to our location in this Great Fruit Belt on the shores of Lake Michigan, but the care that we exercise in selecting, digging, bunching, packing, and shipping our stock also has a great deal to do with the success that thousands of fruit growers have had with KNIGHT'S FRUIT PLANTS.

No orders are too large or too small for us to give them our careful attention, or are we ever too busy to answer your letters if you wish to write us at any time for information. We assure you we will do our part to make you as enthusiastic over KNIGHT'S PLANTS as are thousands of other fruit growers throughout the country. Your part is to make up your order just as soon as this catalog reaches you and send it in to us while our list of varieties is still complete. Let us hear from you.

DAVID KNIGHT & SON

SAWYER, MICH.

One of our patches from which plants will be dug this spring. Photograph taken four months after setting. Note the strong growth. We have millions of plants like these. Sand hills in the distance are on the shore of Lake Michigan.

SOME CULTURAL NOTES

STRAWBERRIES. While strawberries will grow and do well in any soil that will produce corn, wheat or potatoes, still the greatest yield and choicest berries are to be had when grown in rich and well prepared soil, therefore no pains should be spared in selecting and preparing your bed. Do not plant your patch in a newly turned sod, but rather select a piece of land that has been in a cleanly cultivated crop for two or three years. First apply a liberal covering of well rotted stable manure, plow under, harrow and disc until the soil is mellow and free from clods. Mark off the land in rows $3\frac{1}{2}$ feet apart and set the plants in rows from 18 to 30 inches apart, depending upon the nature of the plants; some varieties making much more growth than others. If your plants are a little dry when received wet them thoroughly, not in the package in which you receive them, but each bunch separately. If you are not ready to set out when the plants arrive or if the weather is unfavorable, being dry and windy, then open the bunches and heel the plants in the ground, firm the earth around the roots, water and shade them from the sun, in which condition they will keep in good shape for several days. Trim the roots back about one-third when setting, which will cause them to put out an abundance of new fibres. See that the roots are spread out and placed down straight in the opening made for them, leaving the crown just above the surface of the ground, then firm the soil around the roots and pull it up to the plants. Just as soon as the plants are set, the same day if possible, commence to cultivate, and keep right on cultivating every week or ten days until along toward the middle of August. Hoe, too, just as often as is necessary to keep the weeds down and prevent a crust forming around the plants.

Plants should not be allowed to fruit the first season, for all of their vitality is needed in making growth to produce a crop the following year.

All plants are either Staminate (Male) or Pistillate (Female). Staminate plants have perfect blossoms and are capable of fertilizing themselves, but pistillate plants have imperfect blossoms and need to be planted near perfect blooming sorts in order to become fertilized and produce fruit successfully. All Staminate varieties in this book will be marked "Per," and Pistillate varieties "Imp."

Our stock pleases a New York grower.

Dear Sirs:—The plants came O. K. Thank you. I enclose order for _____
Talcottville, N. Y., May 5th, 1914.
Yours very truly,
T. E. MUNN.

**CULTURE NOTES—Continued**

RASPBERRIES. Either red or black raspberries are a profitable crop wherever grown, and after being planted are not hard to care for. As with strawberries, the same land that will produce good corn or potatoes will also grow good raspberries and with just about the same amount of cultivating and hoeing that you would give corn and potatoes. Black raspberries should be set from 3 to 3½ feet in the row and the rows 7 feet apart. As soon as growth starts and plants are from 18 to 20 inches high, pinch out the top of each cane, which causes them to send out laterals and gives a larger fruiting surface for the following year. Red raspberries should be set 2 feet in the row, and the rows 6 feet apart. Do not pinch off the tips of these, but the rapid growing kinds, such as Cuthbert, should be cut back somewhat in the spring. After the fruiting season of both reds and blacks, cut out the old wood, thus allowing the new stalks to make a good growth for the coming season.

BLACKBERRIES. In planting your blackberry patch select land that is full of humus and retains moisture well, for this crop ripens at a time when we can naturally expect dry weather, and if your patch is on land that quickly dries out, the crop will suffer. Culture for blackberries is the same as raspberries, only they need more room and should be set 3 to 4 feet apart in the row and the rows from 7 to 8 feet apart.

CURRANTS AND GOOSEBERRIES. This fruit requires a rich soil which retains moisture well. The plants should be set 3 to 4 feet apart and the rows 5 to 6 feet apart. Keep the patch well hoed, cultivated and trimmed.

GRAPES. Considered from all standpoints this is one of the most satisfactory crops that can be grown. Almost as sure as the seasons come and go can you depend upon a grape crop. Sometimes larger and sometimes smaller, but they can be classed as a dependable crop and the average amount that can be made per acre, year after year is very satisfactory indeed. And then the harvesting of the fruit and the culture of the vineyard is not such exacting work, as with some other fruits, for the picking season extends over a period of two to three weeks, and the pruning of the vines can be done in the late fall or at any time during the winter when there is a day suitable. No plot of ground is too small to have a few vines planted for table use, and it seems that they cannot be planted on too large a scale for commercial purposes. For instance, here at Sawyer and in the vicinity adjacent are located vineyards of The Lakeside Vineyard Co., comprising over 600 acres of grapes in full bearing. This is the largest vineyard under one management in this state.

Any good dry soil with sufficient drainage is suitable to growing grapes, if the exposure and climate are favorable. Before planting, plow, harrow and pulverize thoroughly down to a depth of twelve or eighteen inches. Plant in rows 8 to 10 feet apart and the plants 10 to 12 feet in the rows. There are so many methods of pruning, different methods being adapted to different localities, that we will not dwell on that point, only to say that proper pruning is very essential to the successful growing of grapes, and the method that is proving best in your locality is the one for you to follow.

Another of our strawberry patches taken four months after setting. Such strong, vigorous stock cannot help but do well for you.

\$100 00 PRIZE CONTEST

For the second time we are offering cash prizes for the most prolific patches of strawberries set with KNIGHT'S PLANTS. Last year a number of our customers entered this contest and, from reports we have received, the plants all arrived in splendid condition, made a good growth, and, when the picking season comes this spring, we anticipate an unusually interesting race for that one hundred dollars. In our next year's catalog the names of the winners, together with photographs of patches, will be published.

Now we hope that several hundred of our customers will enter the contest this year. You have absolutely nothing to lose, nor have we, for we figure that one hundred dollars spent in this way will be more valuable to us from an advertising standpoint than twice that amount with the various periodicals.

Here is something worth considering: You personally have a good chance to win one or two of these prizes, but even should you not do so you would better yourself financially by being one of the contestants, for you would naturally be more interested in your patch and consequently take better care of it, the result being that you would get decidedly more money from the sale of your fruit. Then why shouldn't you enter this contest? There is a spirit of excitement and interest in all contests, but particularly is this true when there is a little money consideration involved. And besides, you are assured of getting the very best stock obtainable, for KNIGHT'S PLANTS are known as GOOD PLANTS in every state in the Union, so, as we stated before, you cannot lose.

Now this contest will be conducted with strict honesty and fairness. Every prize will be awarded on its merits alone and the money will be mailed promptly on the 1st day of September following fruiting season. For our reliability and responsibility in performing our part in this contest we refer you to the letter from American National Bank printed above, or invite you to write to The Berrien County Bank, Benton Harbor, Mich., of which institution we are stockholders, or look us up in Dun's and Bradstreet's commercial directories.

The contest will be conducted just a little differently this year than last. For full particulars and conditions kindly read the opposite page very carefully.

American National Bank

SMALL

SAWYER, MICHIGAN

FRUITS

PARTICULARS OF \$100.00 CONTEST

1. For the acre of strawberries set with KNIGHT'S PLANTS this spring and producing the greatest number of quarts of fruit in the spring of 1916 we will give a cash prize of \$50.00.
2. For the second most productive acre we will give a cash prize of \$15.00.
3. For the half acre of strawberries set with KNIGHT'S PLANTS THIS SPRING AND PRODUCING THE GREATEST number of quarts of fruit in the spring of 1916 we will give a cash prize of \$25.00.
4. For the second most productive half acre we will give a cash prize of \$10.00.

Conditions of Contest

PLANTS TO USE: You must use KNIGHT'S PLANTS exclusively for this contest.

ENTERING TWO CONTESTS:

A one-acre patch cannot be entered in both the one and half-acre contests. If you wish to compete in both then order enough plants for one and one-half acres and state that you are entering both contests when ordering plants.

NUMBER OF PLANTS:

You can set as many plants to the acre as you wish, but we would advise using not less than 6,500, as the best results cannot be obtained on an acre of land with less than that amount.

PROOF:

Make a sworn statement before a notary or justice of the peace stating the exact number of quarts of berries harvested from your acre or half acre patch.

TIME TO ORDER:

All orders for plants must be received by us not later than March 15, 1915.

PHOTOGRAPHS:

Photographs of patch taken during picking season must be sent with your report. Get as good a one as possible.

NOTIFICATION:

When ordering plants notify us that you intend entering the contest, using blank form at bottom of this page.

GROSS RECEIPTS:

While the amount of money received from the sale of berries will have no effect upon the awarding of prizes, still we would appreciate your sending us this information.

.....TEAR OFF HERE.....

DAVID KNIGHT & SON, Sawyer, Mich.

Dear Sirs: I am enclosing order for.....plants, together with \$.....and hereby notify you that I wish to enter your acre contest.

Address

FALL BEARING STRAWBERRIES

See Price List on Page 30.

Progressive Everbearing

SUPERB (Per.)—This variety, as before stated, is by far the best of any of the fall bearing strawberries as tested by us. In our opinion there has never been a variety introduced, either spring or fall bearing, that has as much vitality and fruit producing qualities as the Superb. It seems almost unbelievable that, after producing a crop of fruit the first fall after being planted, they will also bear as large a crop the following spring as any of the spring sorts; still such is absolutely the fact and besides they will produce another good crop the following fall; however, this variety does its very best when grown in hills and runners kept cut. The Superb was originated by Mr. Samuel Cooper, who benefited humanity more by bringing out this one variety than most of us do in a lifetime. The fruit of Superb is large, dark red, glossy, firm and of extra good quality. The plants are healthy growers and make runners freely. Mr. Cooper says that Superb is the finest berry of any kind that he has ever grown, and his judgment can be absolutely depended upon in such matters. We grow several other varieties of fall bearing strawberries, as you will notice, but have twice as many Superb as all the others combined, as they are the most valuable and therefore the call is the heaviest for them. Don't delay ordering until late, however, for

the demand is so great that we do not believe our supply will be adequate.

PROGRESSIVE (Per.)—Mr. Rockhill, of Iowa, has also done wonderful work in propagating fall bearing varieties of strawberries, and the Progressive is undoubtedly the best of his introductions. The berries are of fair size, rich deep crimson in color, nearly round and very glossy. The plants are strong growers, having an abundance of good large leaves. This variety, like the Superb, will produce a bumper crop the second spring planted, after bearing a good crop the fall before. Our supply of plants of this variety is somewhat limited.

AMERICUS (Per.)—This is one of the most thrifty growers of any of the fall-bearing varieties. It does not seem to be affected by the fall crop of fruit produced, and comes out in the spring looking as fresh and vigorous as a June bearing sort. The fruit is from medium to large in size, conical in shape, rich red in color and of a delicious flavor. Fruit of the Americus is produced both on the mother plant and the new runner plants.

IOWA (Per.)—This variety is a strong plant maker, vigorous and productive. The fruit produced is very large and of symmetrical form, but not of as good quality as Americus and Superb.

We have been supplying this large Nursery Firm for nearly twenty years.

Dear Mr. Knight:—We are pleased to hand you herewith our check for — in payment of bill for stock shipped us this season.

Des Moines, Ia., June 1st, 1914.

We want to take this occasion to express to you our appreciation for the splendid plants furnished us, and the dispatch with which you execute your orders, both of which were very satisfactory.

Hoping to have the pleasure of meeting you at our forthcoming convention, we remain, as ever,

SMALL

SAWYER, MICHIGAN

FRUITS

SOME OF THE NEWER SORTS

See Price List on Page 30.

Gibson.

GIBSON (Per.)—Since our introduction of this grand new variety in 1911 we have never been disappointed in it for a moment. In fact, as the seasons come and go we are more and more impressed with its value as a commercial berry. Not only our observations here but the many letters we receive from our widely scattered customers confirm the fact that North or South, East or West the Gibson is the one berry that will succeed in any locality and under nearly all weather conditions. If you have not already a patch of Gibson growing, then we cannot too strongly urge the advisability of planting one this spring. And it is not at all necessary for you to try them out on a small scale at first, for the experimenting has all been done with Gibson and you can plant largely of them with the utmost assurance that they will give you the very largest returns possible for your money invested.

The Gibson commences to ripen with the Dunlap and continues well into the season of the later varieties, which is an indication of its strong vitality. The fruit stems are large and strong and the dark green foliage is an ample protection for the blossoms and fruit. It is a perfect blooming variety. The fruit is large and regular in shape and continues large to the end of the season. In color it is a rich red all over, the meat also being red. The calyx is large and green. Not a speck of rust on it.

One of the largest Nursery Firms in the country pleased with **KNIGHT'S PLANTS AND SERVICE.**

Shenandoah, Ia., 5/26/14.

Gentlemen:—Enclosed please find check on First National Bank of Chicago for _____ to cover your statement. We are very much pleased with the business that we have had with you this season. Our shipments were gotten off promptly and the entire transaction was handled in a business-like manner on your part.

Yours truly,

SHENANDOAH NURSERIES.

KNIGHT'S PLANTS AND SERVICE please a large Missouri Nursery.

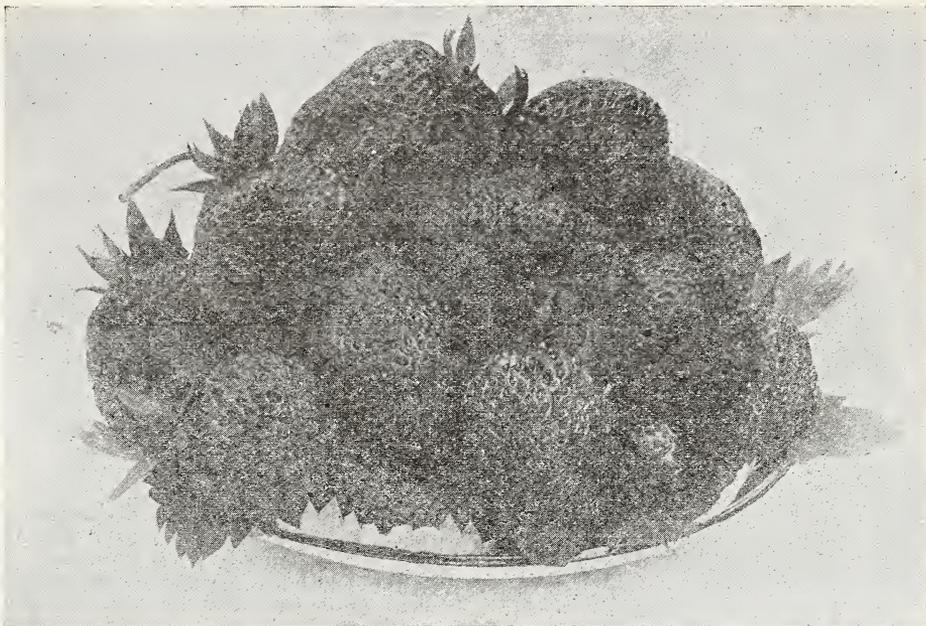

Neosho, Mo., June 6th, 1914.

Gentlemen:—Enclosed you will find check for _____, for account due you as per statement rendered June 1st.

We thank you for your prompt and reliable filling of all orders the past season, and trust that present business relations now existing may continue indefinitely.

Yours very truly,

WILLIAM P. STARK NURSERIES.

**King Edward**

As a shipper it hasn't a superior, being so firm that it will carry to the distant markets in the best of condition. We have never seen a variety that makes such a sturdy growth as this one. In standing and looking over a patch set with Gibson and other varieties you can pick it out at a glance by its healthy, luxuriant foliage. The new plants are also exceptionally strong and well rooted, as you who bought some of this variety from us last season know. Taken altogether the Gibson is an ideal variety, of a size, shape and color capable of commanding the highest price in any market and of a sturdiness able to withstand the drawbacks peculiar to every section.

Our supply of plants of this variety is very large for this season and the quality of stock is exceptionally fine. Don't hesitate about ordering heavily of the Gibson as it will prove one of the largest, if not the very largest, money makers that you have ever grown.

HELEN DAVIS (Per.)—This variety, originated by Mr. Geo. W. Davis, of Indiana, has sprung into popular favor very rapidly. We have fruited it for two years and are very favorably impressed with the showing it has made. The Helen Davis plants are very hardy and strong. The fruit is exceptionally large and of a beautiful dark red color clear through. It is of symmetrical shape, excellent quality, and very productive. In season it commences to ripen early, but continues nearly as long as the later varieties. You should, by all means, get a stock of this excellent new variety, but don't neglect ordering until too late, for the supply is very limited.

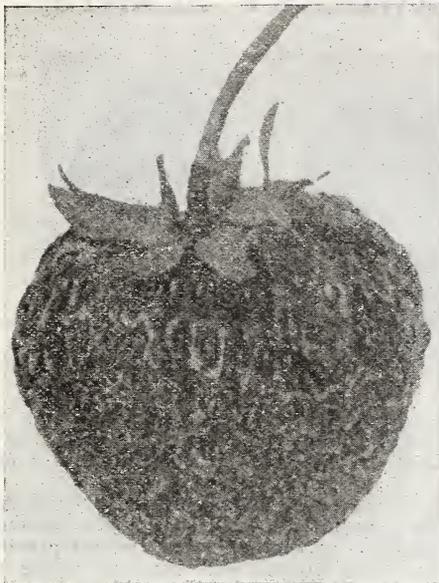

CHESAPEAKE (Per.)—A superb berry by

reason of its large size, firmness, excellent quality and general handsome appearance. It is not a heavy cropper but every blossom will produce a berry of the very best size and quality. It ripens at practically the same time as Gandy. Is equal to that variety in size and shipping qualities and superior to it in quality. We have not found the Chesapeake an exceptionally good plant maker and for that reason our supply of this variety is quite limited.

KING EDWARD (Per.)—Originated in Ohio and is described by a grower in Massachusetts as follows: "It is the rich man's berry, poor man's berry, lazy man's berry and the market man's berry. If one wishes to grow the largest number of quarts to the acre this is the berry to grow every time. It is not one of those large, coarse over-large berries, but of uniform size throughout the season; indeed, every berry looks as though they were all run in the same mould. They are a very attractive, light scarlet color . . . The plant is a strong staminate variety and is just loaded with fruit. Quarts, quarts, quarts; as thick as cultivated cranberries."

We have fruited the King Edward for three seasons and find it to be a very heavy cropper of moderate sized berries. The flavor mild and sweet and the berries are always regular in size. We have a fairly good supply of King Edward plants for this season.

THREE W (Per.)—You should get a start of this grand new variety as it is one of the best. We fruited it last season and think very highly of it indeed. The fruit is very large and of good flavor. Dark glossy red in color. It has a long season of ripening and holds up well in size to the end. It is very

Helen Davis.

firm and at the St. Louis World's Fair won a record for keeping ten days. Midseason to late. Our supply is limited of this variety.

OHIO BOY—This is one of the most recent introductions in the late variety class and has already made a good name for itself. It is a strong, vigorous grower and very productive. The fruit is of good size, dark red all the way through and possesses a rich flavor that makes it very popular. The Ohio Boy is destined to be one of the standard late varieties and you should get a start of them.

PROLIFIC (Per.)—We are still very enthusiastic over the Prolific after fruiting it another season, and consider it one of our very best sorts. The following description, taken from a report of the Experiment Station at Geneva, N. Y., where it was originated, is authentic:

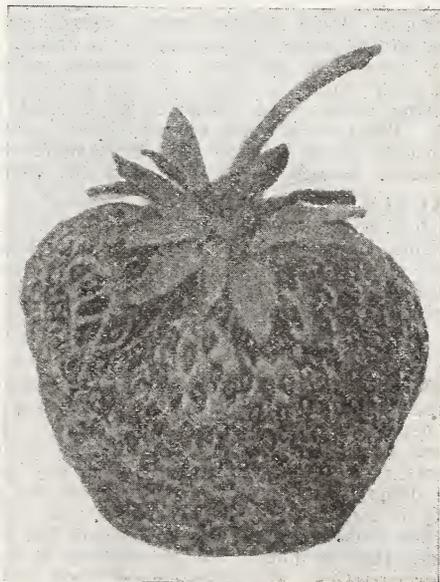

“Plants very numerous, unusually productive, yielding on the Station's grounds as high as 14,502 quarts per acre. Blooms and ripens in midseason, picks easily. Fruit very large to above medium, retains size well as season advances, roundish cone to blunt wedge, rather light in color, but nevertheless an attractive bright scarlet. On account of its vigor, the great productiveness of its plants and the attractiveness of the large, well colored berries, this variety gives promise of taking front rank among standard commercial strawberries.”

We have a nice supply of the Prolific and trust you will not hesitate to order freely of it.

ST. LOUIS (Per.)—We need another good early variety, and this one seems to be just what we are looking for. One authority says of it as follows: “Originated in Arkansas and is one of the best second early varieties in all respects that I have ever fruited. The plants are large, with tall, bright glossy green foliage, very deep-rooted and great drouth resisters. It is very productive for an early variety and the fruit is large, roundish conical, bright, glossy red and of good quality. The fruit-stalks are large and strong, which keeps the fruit from the ground. While it is not as firm as some it is in great demand on account of its earliness, large size and productiveness, and is firm enough for shipment to markets that are not too far distant and readily sells for fancy prices.”

Our supply of this variety is somewhat limited and we would advise you to write early and get a start of this grand early berry.

BUSTER (Imp.)—This berry is a cross between the Bubach and Sharpless. You all know the Bubach and have probably often thought what a grand variety it would be if it could have some of its defects rectified. The Buster seems to be the Bubach plus the improvements that you would make in it. It much resembles the Bubach but is much more productive and will stand much more hard treatment and cold weather than the Bubach. It is a pistillate variety like the Bubach and wants a good fertilizer to make it do its best. It commences ripening in midseason, but continues through a long season and keeps its size well to the last. Our supply of the variety is limited.

St. Louis

A New Hampshire customer satisfied, and wants more.

Dear Sirs:—The strawberry plants I ordered arrived safely and are very good. If not too late, I am anxious to put out some more plants as follows, —

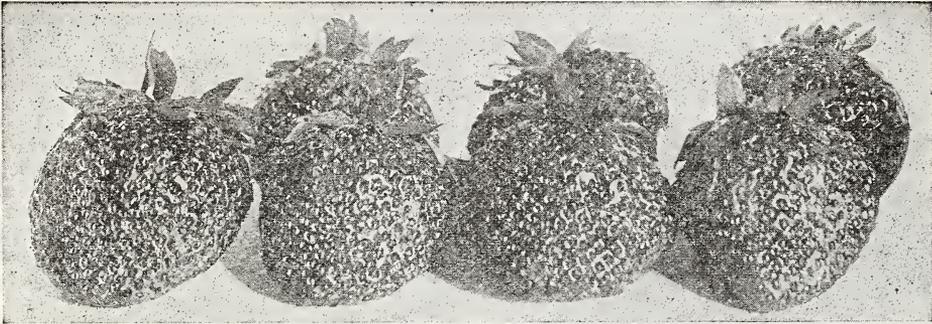

Suncook, N. H., May 20th, 1914.

Very truly yours,

MABEL H. WALKER.

GENERAL LIST OF STRAWBERRY PLANTS

Brandy wine

The varieties given under this list are all those that we have fruited extensively for several years, and know to have merit. As soon as we find that a variety is not worthy after giving it a fair trial we drop it, and in this way give our customers the benefit of our long experience.

Of course, we would not say positively that all the varieties named below would do well with you, for in all probability there are some that would not, as certain varieties have their natural localities where they will do well and if taken to another locality might prove of little value, and that is the reason that the up-to-date berry grower will keep on trying out different varieties until he finally gets the ones that are the most valuable to him. Our long experience with the different varieties has taught us where they are most liable to do well, and any information that we have will be gladly given you for the asking. For price list see page 30.

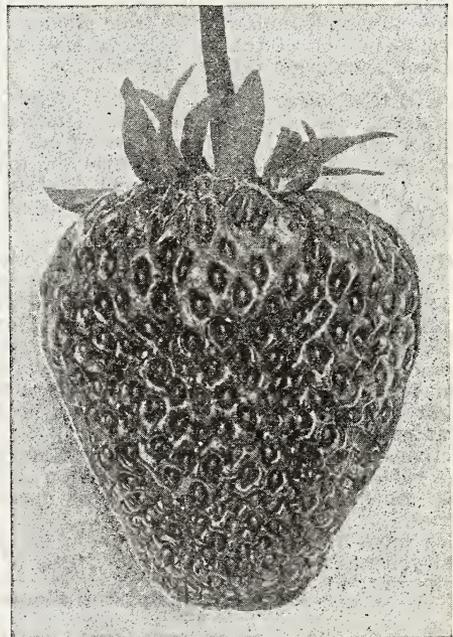

AROMA (Per.)—One of the old standard varieties that, in certain sections, continues to be a favorite in spite of the many new varieties being introduced. It seems to be better adapted to the South and Southwest, although it has been grown very successfully here in Michigan. Fruit is very large. Bright red in color to the center. Has a delicious flavor. Is very productive and firm of texture, making it a great shipping berry. It has a very long fruiting season and continues good until the end. Plant is a very strong stalky grower with deep green foliage. The demand for this variety is usually far in excess of the supply.

AUGUST LUTHER (Per.)—This is one of the best early strawberries grown. It is very prolific, comes in bearing early and continues good size until all of its crop is produced. Fruit is very uniform in size and shape, is dark red in color, firm, and very easily picked. As with all early varieties it will succeed better on rather light soil.

BUBACH No. 5 (Imp.)—One of the largest berries of the old varieties. It is very popular in nearly all sections of the country. The plants are model growers, making just enough plants for a nice fruiting row. Every year the demand for plants of this grand old variety is larger than the preceding one. They do not make plants very freely and for that reason they cannot be sold as cheaply as some other varieties. We have a good stock, but as the demand for them is always heavy you should order early so as to be assured of getting them.

BEDERWOOD (Per.)—This is one of our best standard berries for market. We have fruited it for many years and it has always

given a paying crop. It is early, a very strong yielder, and continues a long time in bearing. The fruit is good size and as firm as the Crescent, but it is liable to rust and should not be planted on wet soil. Does better North than South.

Aroma

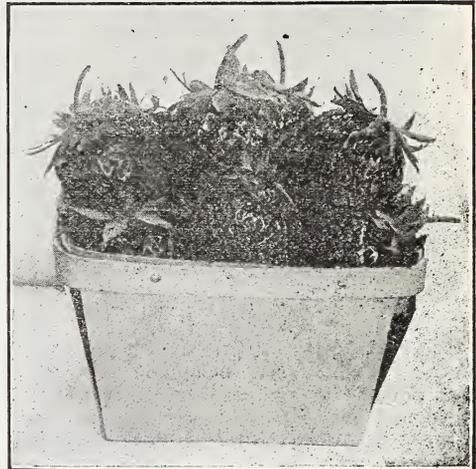

BRANDYWINE (Per.)—Very vigorous, perfect blooming plant; tall fruit stalks; broad, heavy, dark green foliage. Plants very productive, having four and five stalks heavily loaded with large to very large berries. Medium red, somewhat like Gandy, only a little more dull; large yellow seeds on surface. Flesh red clear through; firm, somewhat acid, but with very sprightly flavor; ripens medium to quite late. Does best on heavy loam or heavy clay. Like all large berries, they should have plenty of room in the row. Plants should not be closer than eighteen inches, so they can build up strong stools.

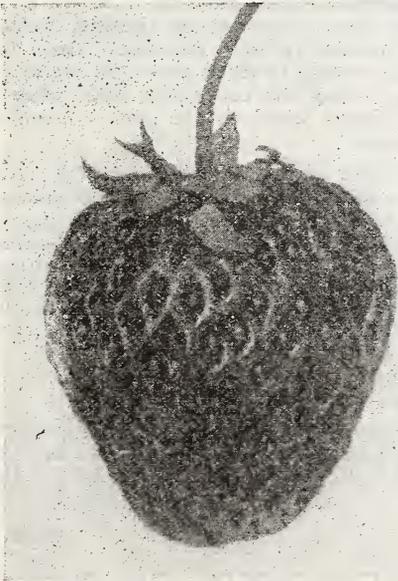

BARTON'S ECLIPSE (Imp.)—This is a reliable standard variety that always gives satisfaction. It is a splendid grower and heavy yielder of large, firm fruit of excellent flavor. It greatly resembles the Haverland and is just as productive, which is saying a great deal for it. It is one of the best standard sorts and you should not miss it when making up your list.

CRESCENT (IMPROVED) (Imp.)—The standard of productiveness all over the country; succeeds everywhere, stands neglect best

of any, plant small, berries fair size, bright and attractive, not very firm. Many growers consider this the most profitable berry for market. We have been growing the Crescent for over 20 years. Very few varieties have stood the test so long.

Warfield—See Page 16.

Barton's Eclipse

GLEN MARY (Per.)—A strong, vigorous-growing, healthy plant. Some seasons it has pollen to fertilize itself, but it is better to plant it next some perfect blooming variety, like Ridgeway, Brandywine or Gibson. The Glen Mary is fast growing in favor all over the country. The berry is so large and fine looking it always commands the highest price in market. It needs good soil, good culture and plenty of room in the row.

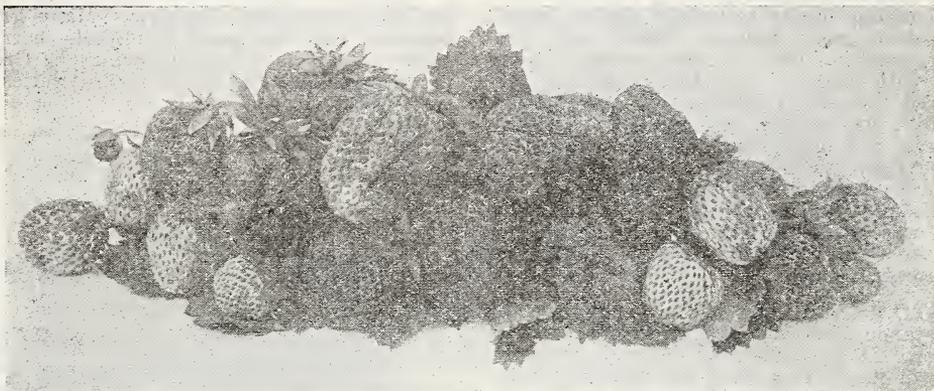

GANDY (Per.)—This is one of the most reliable, large, late berries that is grown. It is one of the old standard varieties that you can depend upon. The plant is a strong grower, a good plant maker. The large, handsome appearance of the fruit always commands for it a large price in market. The fruit always grows large and is one of the best shipping varieties known. In some localities the Gandy is not so productive as some varieties, but the fact that it ripens late and is of a hardy nature indicates that it will do well in any soil where other berries grow. You can't afford to be without Gandy, whether it is for home or market use.

KNIGHT'S PLANTS made a "well pleased customer."

Dear Sirs:—The plants you shipped on the 12th arrived yesterday, the 15th, in fine condition and I wish to thank you for your prompt service in sending the duplicate order. I remain a very well pleased customer.
 Perrysburg, N. Y., May 16, 1914.
 Yours very truly, **GEO. F. CHEESMAN.**

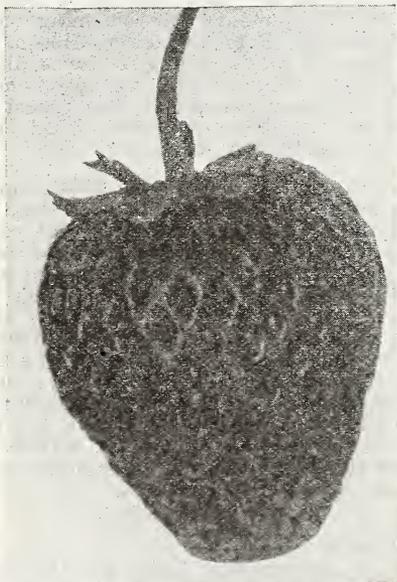

Certificate of Nursery Inspection No. 1469.

(Duplicate) This is to certify that I have examined the Nursery Stock of David Knight & Son, Sawyer, Michigan, and find it apparently free from dangerous insects and contagious tree and plant diseases. This certificate to be void after July 31, 1915. L. R. TAFT, State Inspector of Nurseries and Orchards. Agricultural College, Michigan., Sept. 29, 1914.

Pride of Michigan—See page 15

HAVERLAND (Imp.)—Exceedingly productive. Fruit large and fine. One of the most popular of the well-tested varieties. It will stand more frost than most any other variety, often bearing large crops when others are killed. We can always depend on a large crop. Few varieties will produce more fruit per acre or sell for more money. The demand for plants is always great.

Haverland

HERITAGE (Per.)—"The plant is very large, of extremely heavy texture, some single crown plants carrying foliage with a spread of 20 or 22 inches. Deep rooted and extremely free in fruiting, beginning to ripen its fruit about early midseason and continuing to very late. Another prominent feature is that the

fruit stems continue to shoot so late that during the early picking season there are many blossoms, which indicates to the experienced grower their long season of productiveness. The berry is dark, shiny, crimson to the center. Has a perfect blossom. Carries an unusually heavy green calyx (adding decidedly to its market value). Extremely large from the first picking to much above the average for the main crop and continuing large after the better known varieties are gone."—From the introducer.

We have fruited the Heritage for several seasons and every year grow more enthusiastic over it. Three years ago when the cold weather killed a good many of the standard varieties the Heritage came through with colors flying, and every year that we have fruited it its exceptional value has shown itself. Don't fail to include this one in your list, as it will prove a money maker for you.

"SOME WHISKERS."

Cortland, Ohio, April 28th, 1914.
Dear Sirs:—Please excuse delay in writing you as to the arrival of plants. To say I am pleased is putting it mild. They are all right and, as my son says, "have good whiskers" (roots). With best wishes, I remain,

Yours truly,
S. J. SMITH.

KNIGHT'S PLANTS Better Than He Expected

New Hartford, Ia., April 25th, 1914.
Dear Sirs:—I received the shipment of berry plants and have them all set out and will say they are far better than I expected. They not only arrived in good shape, but such lovely roots they had. Enclosed please find draft for some black caps

Yours truly,
E. J. JIMMERSON.

Blackberry Plants Please Illinois Customer.

Barry, Ill., April 21st, 1914.
Dear Sirs:—I sent you an order for strawberry plants last night. It will be a favor if you can rush them out right away. My blackberries look fine that I bought from you last year.

Yours very truly,
EUGENE McDANIEL.

Pocomoke

LOVETT (Per.)—This is one of the best market varieties. It succeeds generally in any soil or locality; it is one of the tough hardy varieties. The plants are rank and vigorous. The fruit is of good uniform size, of a high, rich color, and splendid flavor. It is highly spoken of all over the country. It is one of the best shipping varieties, especially adapted for Southern planters where firmness of berry is necessary for long shipment. An old standard variety and reliable to plant anywhere and in any soil that will grow strawberries.

POCOMOKE (Per.)—From the standpoint of a commercial grower this comes very nearly being a perfect variety. It is a healthy, luxuriant grower, making plenty of runners, and is an abundant bearer of large, firm, bright red berries. Never misshapen and holds up in size better than a great many varieties. It is a superior berry in every way, with exception of being a little tart; however, this makes it very popular as a canning berry. Needs no petting and will produce large crops under reasonably good culture. For some time we have noticed the similarity of the Pocomoke and Parson's Beauty and are now convinced that they are one and the same variety.

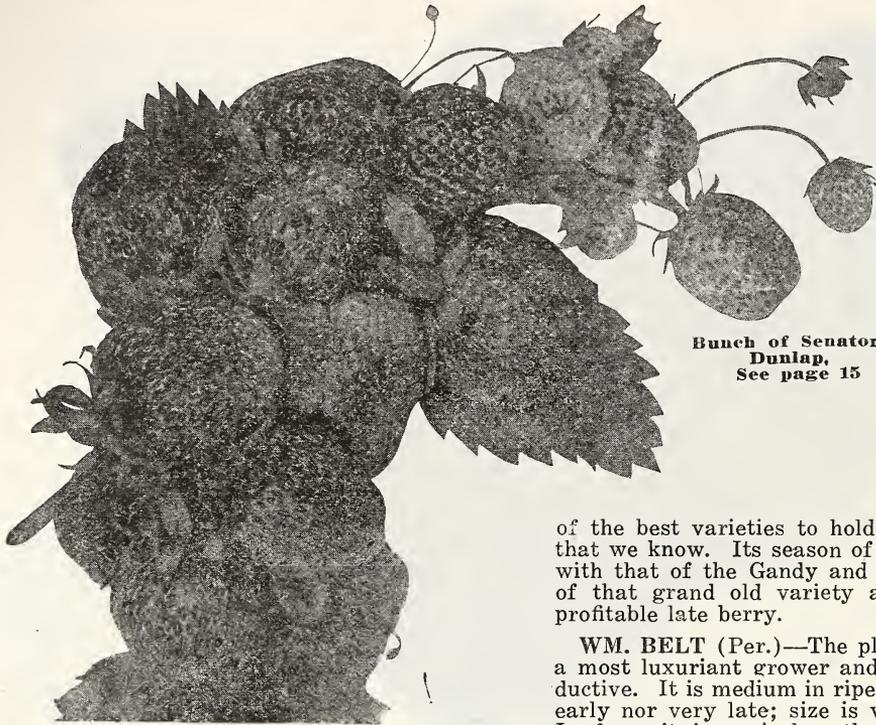

PRIDE OF MICHIGAN (Per.)—This berry was originated and introduced here in Berrien County. The berry is a bright, glossy red, large and rather oblong; firm and of good quality. It is a productive plant maker. The season of ripening is with the Dunlap, medium early. We have fruited it and find it a promising variety.

RIDGEWAY (Per.)—Plant large and stocky, possessing the ability to make a large number of healthy, strong plants. Leaf large, broad, heavy and dark green in color. A good pollinizer for pistillate varieties, as it remains in bloom a long time. Berry large to the very last; the typical form nearly round; the largest specimens broadly ovate, but always smooth. Color glossy crimson with golden seeds.

SENATOR DUNLAP (Per.)—This berry has been very highly recommended since its introduction in 1900, and growers of it have not been disappointed. In all localities where it has been planted we hear nothing but praise for the Senator Dunlap. It sends out many runners and should have plenty of room. The plant is perfectly healthy and an enormous bearer. It commences to ripen soon after the earliest and continues until near the close of the season. The fruit is large, but not the largest, and conical in form. The color is a deep, rich red, the flesh is also red, and has a sprightly, delicious flavor. This variety is grown largely as a commercial berry. Two hundred bushels per acre is not an uncommon yield. The demand for Dunlaps is very large. We have several hundred thousand plants, so do not be afraid to order heavy as we can supply you.

Pleased With Plants and Service.

Barry, Ill., April 28th, 1914.
Gentlemen:—Plants arrived in first class condition. Thanks for your promptness.
Yours for future business,
EUGENE McDANIEL.

Bunch of Senator
Dunlap,
See page 15

SAMPLE (Imp.)—A valuable, large late variety. Sample has scored such a marked success in many places that no progressive grower can afford not to plant some of it. The successful man is he who tests all really promising varieties and in that way quickly finds those suited to his own soil, climate, etc.

Michigan Horticultural Experiment Station says: "Sample has proved itself to be a very valuable sort. It is hardy and productive of choice, attractive berries. It has large, healthy foliage, and stout fruit stalks. With strong soil and good culture it is one of the most promising kinds."

STEVENS' LAKE CHAMPION (Per.)—This is one of the best and most popular late varieties grown. It makes strong, vigorous plants which produce an abundance of fruit. The plants send out a great many runners that take root quickly and cover the ground if not restrained. The fruit and blossoms are well protected by the abundance of foliage. The fruit is large, long and slightly flattened. The color is a deep red, the flesh being also red. It ripens all over and is very firm, being one

of the best varieties to hold up after picking that we know. Its season of ripening is about with that of the Gandy and is a worthy rival of that grand old variety as a popular and profitable late berry.

WM. BELT (Per.)—The plant is very large, a most luxuriant grower and remarkably productive. It is medium in ripening, neither very early nor very late; size is very large indeed. In form it is conical, rather long and quite uniform in shape. The color is a brilliant, glossy red—as near perfection as was ever seen in a berry. It ripens all over without green tips. The quality is good—better than is usually found in large berries. The foliage of Wm. Belt, as grown here, is affected with some rust and to insure a good crop every year it should be sprayed, and it should be planted on well drained, warm soil.

UNCLE JIM (Per.)—A good grower of large, stocky plants, well spaced for fruiting. The fruit is large, high colored, quite firm and of good quality. A choice among the standards. The plant is very large, and the roots go deeper than any variety we have, which makes it well able to resist drouth.

WARFIELD (Imp.)—The Warfield is a great plant maker, covering the soil, with only fair treatment. The berries are deep glossy red and are very attractive in market, when well grown. It is red to the center, very firm and much sought for by canners. It has the record of producing immense crops of berries, but to do its best must have a rich, moist soil, good culture, and the plants kept thinned somewhat in the row.

A Tennessee grower pleased with KNIGHT'S PLANTS.

Ripley, Tenn., June 6th, 1914.
Dear Sirs:—Enclosed please find check for — for the raspberry plants you sent. I am more than pleased with the plants you sent. They started to grow nicely and will have a good many berries on them this year. Many thanks.
Respectfully,
W. B. SUTTON.

KNIGHT'S PLANTS favorites at home also.

West Branch, Mich., 5/23/14.
Dear Sirs:—Thank you for replacing the plants which came tonight. They arrived in nice shape and weather conditions are so favorable, I do not think there is any question about their doing well.
Yours truly,
ARCHIE C. IRONS.

**RASPBERRIES**

For Price List See Page 30.

Cumberland

Raspberries have proven such a profitable crop to grow for the past few years that plant growers have had hard work supplying the demand, and a good many times have had to return late orders, the supply being entirely exhausted. This threatens to be the case this season, for the dry weather last fall cut the crop to less than one-half of its usual size. We could have sold all of our plants to the wholesale trade, at long prices, last fall had we wished, but would only accept orders for 300,000, and so have a full list of varieties for this spring, but the demand is already so heavy that our supply will not last long, and it is really necessary for you to place your orders just as soon as our catalog gets into your hands.

BLACK CAPS

CUMBERLAND—This is the largest of all the black caps and one of the very best. New ones come and go but since the Cumberland was introduced several years ago it has been forging steadily ahead, until at present we believe there are more Cumberlands grown than any other two varieties. There is only one reason for this and that is that they are money makers. They are healthy, vigorous growers, throwing up stout, stocky, well-branched canes that produce immense crops of magnificent berries. The fruit is large and firm; the quality is fine. Plant Cumberland for the main crop.

CONRATH—One of the best mid-season varieties. A strong grower and hardy in wood and bud. It has been widely tested and highly recommended from all sections of the country.

GREGG—One of the old standard varieties. Well and favorably known wherever raspberries are grown. It is a heavy producer of good sized fruit of excellent quality. It is hard to beat the Gregg for a late variety.

KANSAS—A good early variety. Berries of good size, jet black and of the best quality. Kansas is popular over a wide area of country.

PLUM FARMER—Although this is one of the newer introductions in black caps it has come rapidly to the front. In this section it is being planted very heavily for an early variety and within a year or two we predict that Plum Farmer and Cumberland will be used nearly exclusively for the main crop. The plants are healthy, vigorous growers and the fruit is of good size and ripens all of its crop within a short time. Be sure to get a start of the Plum Farmer this year.

Another Illinois customer pleased.

Sirs:—I would like to have some more strawberry plants. Can you supply at the same price as last shipment? One party got 8,000 of them and he says they are doing fine.

Yours truly,

Centralia, Ill., 5/1/14.

A. W. WEBSTER.

RED RASPBERRIES

For Price List See Page 30.

St. Regis Everbearing Raspberry

ST. REGIS. This variety, we consider, is one of the most valuable red raspberries that has ever been introduced, and it is our prediction that a few years more will see it as extensively grown as any of the old standard varieties. And there is no reason why it shouldn't be, for it has all of the good qualities of any of the old sorts and a great many that none of them possess. Here are a few of the reasons why we can so strongly recommend the St. Regis: The fruit is of good size, a beautiful brilliant crimson color, of delicious flavor, and so firm that it will carry to distant markets in excellent condition. It is the first red raspberry to ripen in the spring, coming at the close of the strawberry season. The first crop to ripen is the main crop and is a bumper. Not excelled by any of the other varieties; they do not stop bearing as soon as this first crop is produced. Instead they keep right on bearing in small quantities, of course, all summer and autumn. By the last of August, the new growth of wood, which has been produced during the summer, is ready to bear fruit and continues to bear in increasing quantities until the severe frosts stop them. Sounds almost too good to be true, doesn't it? That is what we thought before we had tried them, but if you could have enjoyed with us those delicious berries all during last summer and fall, you would have been convinced the same as we are. Another unusual quality of the St. Regis is that they will produce fruit the first season planted. Not in large quantities, of course, but enough to keep the table well supplied and at a time when other raspberries have been gone for weeks. It has never been our custom to urge customers to try new and expensive varieties, but we have become so thoroughly convinced of the merits of this berry that we can honestly advise you to buy the St. Regis whether you want only a few dozen for the garden or several thousand for commercial purposes. Our supply of plants is not large, so you should send in your order early and not run the risk of going another season without getting a start of this grand new berry.

An Indiana customer pleased.

Dear Sirs:—I received the strawberry plants this a. m. and they are in fine condition.
West Terre Haute, Ind., 5/4/14.
Yours very truly,

J. A. MAHER.

RED RASPBERRIES—Continued

Cuthbert.

HERBERT—This new red raspberry, originated in Canada, has the record of having withstood 40 degrees below zero and produced a large crop of fruit the following season. We have never had weather cold enough here to give it that test, but the thermometer has gone down pretty low the past three winters and Herbert has always come through in fine shape. It is a heavy cropper. The fruit is large, like Cuthbert, and of excellent flavor. In season of ripening it is about a week earlier than Cuthbert. We would advise all to get a start of this variety, but as our supply of plants is limited, you will have to get your order placed early.

CUTHBERT—This is one of the most valuable of the old standard varieties. It has been widely grown in all sections of the country and has given excellent results both for home use and commercial purposes. Cuthbert is a good, vigorous grower and produces bountifully of large and beautiful bright red berries. Probably no other red raspberry is grown as extensively as the Cuthbert and the demand for plants is always heavy. We grow them by the million every year in anticipation of the enormous demand, but even then we sometimes run out of them before the season is ended. Don't fail to get a supply of the Cuthbert for the main crop for they are the very best late red that we have and no fruit grower can afford to be without them.

MILLER—The bush is a stout, healthy, vigorous grower, not quite so tall as the Cuthbert, rather more stocky and dwarfish. It is well

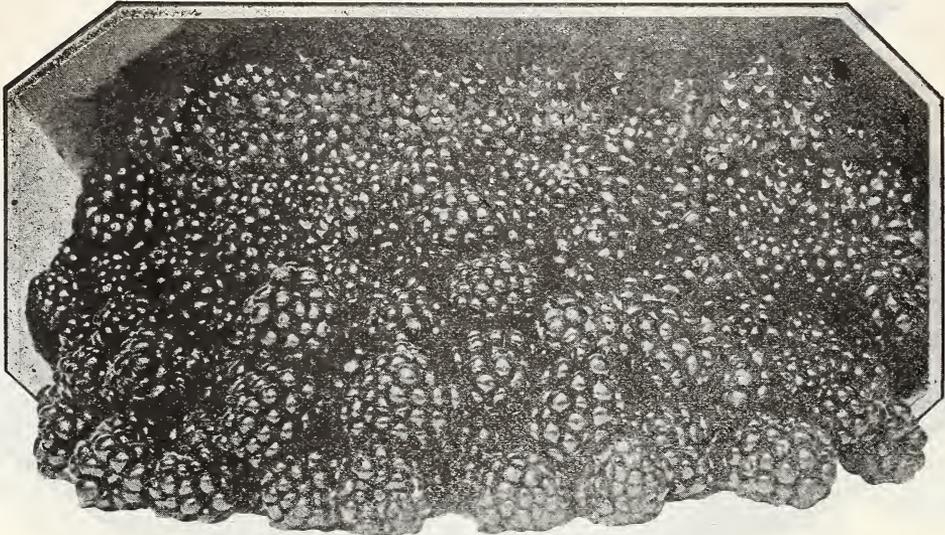

calculated to hold up immense crops of fruit, with which it loads itself. The introducer claims: "Extreme hardiness and productive as any. It is quite early, an excellent shipper, of good quality and attractive color. It should be tried by all who want the best shipper to distant markets."

KING—Since its introduction several years ago the King has been rapidly growing in public favor, until at the present time it takes the lead of all early varieties. It is a seedling of the Thompson and ripens about the same time, but is much larger and more productive. Fruit is of good size and of a bright, beautiful color; firm and of exceptionally good quality. It is immensely productive and, commencing to ripen early, it always commands a good price in market. Making a selection from the old standards, our advice would be to plant King for early and Cuthbert for late, and you will always be assured of a profitable crop. We have a good supply of plants and all who order will be assured of getting exceptionally fine stock.

COLUMBIAN (Purple Cap)—This, in our opinion, is the best of the purple varieties. It is very hardy and produces large quantities of berries of enormous size, sometimes measuring one inch in diameter. The color is dark red, nearly purple. It shows its relationship to the blacks by propagating its plants from the tips. We do not believe that any of the purple caps will ever be considered seriously as commercial berries, but for home use and home market they have proven very satisfactory.

**BLACKBERRIES**

For Prices See Page 30.

**Eldorado.**

BLOWERS—This new blackberry was introduced by M. Crawford, and we know it must be good or he would not introduce it. He makes the following claims for it besides furnishing a long list of testimonials from good authorities all over the East. "Blowers' blackberries are always on top. They are big, luscious, overshadowing all others; never winter kill, always in demand, rich in quality and quantity. Record from one-fourth acre, 2,347 qts., 3,520 lbs., 1 ton 1,520 lbs, 73 bushels, net price \$254.04; rate of \$1,056.16 per acre. Height of bushes, 14 feet; berries on one bush, 2,694."

EARLY KING—An extra early blackberry, an exceedingly hardy variety of great merit. It needs no winter protection, always producing large crops. Canes of strong growth. It is larger than Early Harvest, and its delicious sweetness renders it of special value for home use or market. It is free of double bloom and other diseases, will go through hard spring frosts in blossoming time without injury. Those who have tried this variety are well pleased.

MESEREAU—Originated in Northwestern New York. Iron clad in hardiness; has a combination of the desirable qualities of a good blackberry; exceptionally sweet, rich and melting, nearly without core. Canes very strong, upright grower, attaining a height of seven to eight feet. The yield is simply enormous, and affords heavy picking from the first until all the crop is matured. Season late.

EARLY HARVEST—This is one of the earliest blackberries in cultivation, a compact, stocky grower. Fruit medium size and firm quality. An enormous bearer. Grown here largely for market, and is meeting with great

favor. It is not hardy, needs protection in winter.

WILSON'S EARLY—One of the largest and most productive of the early sorts. It is grown here largely for the market, as it pays better than any other variety. It always sells at a premium over other blackberries in Chicago market and is daily quoted higher. The berry is large, jet black, and holds its color, never turning red. It is not hardy, and here in the North needs winter protection to insure crop. By taking pains to lay it down, as it is done here, it can be grown anywhere in the North. In the South it will need no protection.

SNYDER—Extremely hardy, wonderfully productive, medium size, very popular in the West. Not very largely grown here.

ELDORADO—Of great promise, has been cultivated twelve years, and under careful test at different experiment stations for four years has never winter killed or failed to produce a full crop of the finest fruit. The vines are very vigorous and hardy, enduring the winters of the Far Northwest without injury, and their yield is enormous. Berries are very large, jet black, borne in large clusters and ripen well together; are very sweet, melting, pleasing to the taste, and have no hard core; quality unimpaired. The demand for Eldorado has been greater than the supply, so if you do not wish to be disappointed order early.

RATHBUN—This blackberry has been tested over a wide area and is said to surpass any blackberry that has yet been introduced. The berries are large—larger than Kittatinny—of an intense jet black. It is a cross between a dewberry and a blackberry. It is propagated from roots or tips like a blackberry. It ripens early. It is well worthy a trial.

DEWBERRIES

For Price List See Page 30.

LUCRETIA DEWBERRY—Claimed to be the best of the blackberry family. Berries are far larger and incomparably better than any blackberry; of unequalled excellence; soft, sweet and luscious throughout, of brightest glossy black color. The Lucretia dewberry has received the endorsement and highest praise from the leading horticulturists in the country. Its eminent success in all soils is something phenomenal in small fruit culture. Its trailing habit renders it less liable to winter kill.

"The only valuable dewberry."—W. B. Ellis, Cumberland, N. J.

"Grown largely for market. In North Carolina ready for market before the strawberries of the Middle States are on the market; thousands of acres are devoted to the crop. Form-

erly the canes were trained on low wires, but now the universal method is to let them run while growing, and in spring, after danger of cold is over, the fruiting canes are tied to stakes, while the new shoots are allowed to run along the rows out of the way of cultivation."—Practical Farmer.

"Heavy bearer, firm shipper, best quality."—J. Casazza, Cumberland Co., N. J.

"Three varieties have been tested; none better than Lucretia."—Illinois Horticultural Society.

PREMO—This variety is earlier and larger than the Lucretia and very much resembles that variety. The blossom is imperfect and must be planted with Lucretia to secure the best results.

CURRENTS

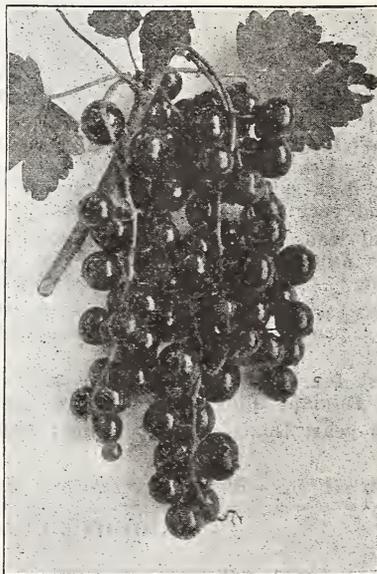

PERFECTION—A new variety that has created a big sensation for the past few years. It was propagated by scientific principles from the Fay's Prolific and the White Grape, and so successfully was it crossed that it possesses most of the good qualities of both of them. It won the famous Patrick Barry medal, the committee making the following report: "Season of ripening same as Cherry and Fay. Color bright red, a good grower. Size very large, larger than Fay and Cherry, Clusters very long. Very productive, resembling the White Grape in this respect. Quality very fine. Not so acid as Fay and other red sorts. As a table currant cannot be surpassed. A very important fact is that it has a long stem from fruit to attachment to branch, making it easy to pick." In addition to the Barry Gold Medal the Perfection won the highest awards at the Pan-American Exposition and a gold medal at the St. Louis World's Fair. The call for the Perfection has been so great ever since its introduction that there has never been enough plants to supply the demand, and to those who desire to get a start of this grand new currant we would advise you to place your order just as early as possible.

Price, 2 yr., No. 1 plants, doz., \$1.50; per 100, \$10.00.

FAY'S PROLIFIC—Probably the most popular of all the older varieties of currants. It is early, of a good color and size and very productive. It does better on a heavy soil, and when given proper care can always be depended on for a crop that will sell at good prices.

Price, 2 yr., No. 1, doz., 85c; 100, \$4.50.

CHERRY—Bush vigorous, stocky and compact, clusters rather short with short stems; fruit averages large; color fine, bright red; berry thin skinned, juicy and fine flavored.

Perfection.

One of the most productive of the large currants.

Price, 2 yr., No. 1, doz., \$1.00; 100, \$5.50.

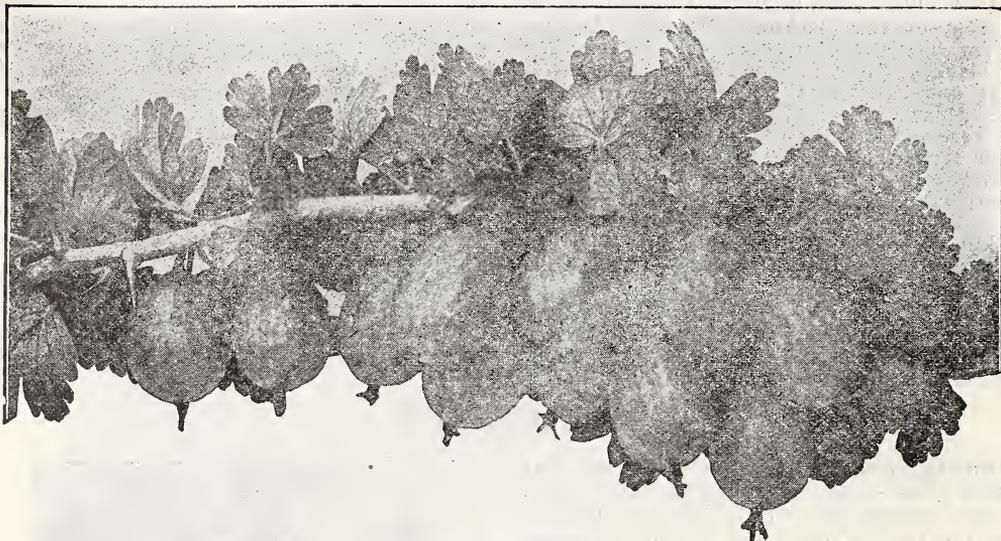

VICTORIA—Berries are very large; the bunches long; fruit of bright red color and excellent quality. It is a very strong growing variety and exceptionally hardy. One of the very best of the old varieties.

Price, 2 yr., No. 1, doz., 85c; per 100, \$4.50.

LONDON MARKET—For many years this variety has been fruiting in Michigan, where it is now planted extensively and regarded as the best market variety of that great fruit state. Plant is extremely vigorous, with perfect foliage, which it retains through the season; an enormous cropper.

Two years old, No. 1, doz., 85c; 100, \$4.50.

GOOSEBERRIES

Downing Gooseberries

DOWNING—Bush vigorous and very productive. Fruit medium to large, skin whitish green; flesh soft, juicy. Excellent for family use and very profitable for market.

“Still leads as the most profitable variety of the Americans. Best variety for general planting.”—Michigan Agricultural Station.

“Very popular; large size; bush strong, hardy, prolific.”—Illinois Horticultural Society.

“Best for heavy, black prairie soil.”—Hon. H. M. Dunlap, Illinois Horticultural Society.

Two year, No. 1, \$1.50 per doz.; \$8.00 per 100.

HOUGHTON—Bush a vigorous grower,

with rather slender branches; very productive. Fruit medium size, pale red, tender and good. An old, reliable variety.

“Hardest as well as the most productive. Preferred for preserves or canning to any other. Have had a fair crop from Downing and Smith Improved, both larger than Houghton.”—D. W. Buchanan, Manitoba, Canada.

“Best of all well-tested sorts for general planting.”—South Dakota Horticultural Society.

“Steady, regular bearer; very productive, free from mildew.”—Illinois Horticultural Society.

Two year, No. 1, \$1.25 per doz.; \$7.00 per 100.

KNIGHT'S PLANTS look like rows of soldiers.

Sirs:—Many thanks for your prompt shipment of the plants. They are all in the ground and a fine rain just after they were planted makes them look like rows of soldiers.

Respectfully,

W. W. GUNTHER.

An Ohio customer pleased.

Gentlemen:—Raspberry and strawberry plants received several days ago. The plants were fine and you sent me a number extra for which please accept my thanks. Will remember you when ordering again.

Harrison, Ohio, May 13th, 1914.

Yours truly,
JOHN F. HENDERSON.

KNIGHT'S PLANTS have many friends in Ohio.

Dear Sirs:—Please find enclosed M. C. for — which is due your firm and hope this is all right, and hope our business will be as pleasant in the future as in the past. The plants were in good shape.

Van Buren, Ohio, 5/11/14.

Yours truly,
C. E. HANNA.

A Colorado grower says “KNIGHT'S PLANTS the best received yet.”

Dear Sirs:—I am well pleased with the strawberry plants you sent me by Solon Lee and Joe Robertson of Bluff Springs, Ill. They are the best of any received yet.

Merino, Colo., April 5th, 1914.

Yours truly,
C. L. ROBERTSON.

GRAPES

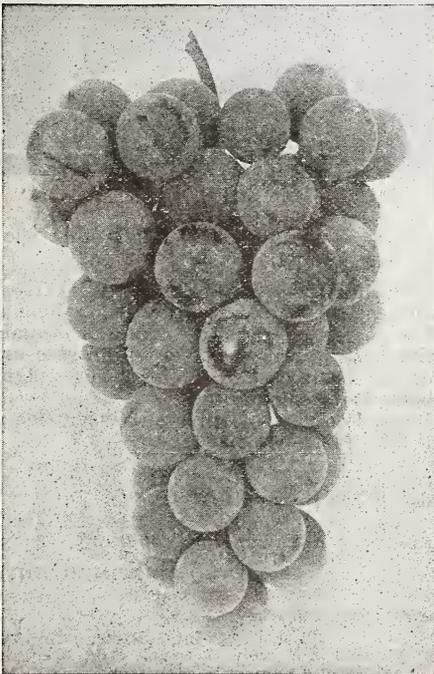

Concord
Grapes

CONCORD (BLACK)—Early; decidedly the most popular grape in America, and deservedly so. Bunch large shouldered, compact; berries large, covered with rich bloom; skin tender, but sufficiently firm to carry to distant markets; flesh juicy, sweet, pulpy,

tender; vine a strong grower, very hardy, healthy and productive. For general cultivation the most reliable and profitable variety grown.

Price, two-year-old, No. 1, 75c per doz.; \$3.00 per 100; \$25.00 per 1,000.

Moore's Early

NIAGARA (WHITE)—Occupies the same position among the white varieties as Concord among the black, the leading profitable market sort. Bunch and berries greenish white, changing to pale yellow when fully ripe. Skin thin but tough; quality much like Concord.

“Leading white for home use and market.”—Michigan Experiment Station.

“As is shown by my plantings, I consider it not only the best white grape, but the best grape of any color. If restricted to one variety, for either home or market, would choose Niagara. Other sorts are better in some particulars, but taken as a whole, there is no other its equal. Good growers, productive enough, always handsome in bunch and berry, of very good quality, with flavor one does not tire of. Will hang after ripening without rotting, cracking or wilting longer than most others.”—E. H. Riehl, Illinois Experiment Station.

“Standard white grape for home and market.”—Georgia Experiment Station.

Price, two years, No. 1, 75c doz.; \$4.00 per 100; \$35.00 per 1,000.

MOORE'S EARLY—Very popular for early market. Moderate grower, healthy and hardy; with good soil, high cultivation and pruned long it is sufficiently productive. Larger than Concord, same color and flavor.

GRAPES—Continued.

“Good quality, good grower, but rather unproductive.”—Michigan Experiment Station.

“Profitable here. Pulp somewhat hard, but the earliest good large sort and always brings better prices than later sorts.”—E. H. Riehl, Illinois Experiment Station.

Price, two years, No. 1, 75c per doz.; \$4.00 per 100; \$35.00 per 1,000.

CAMPBELL'S EARLY—Is a new variety of the Concord type, of great promise. It is one of the strongest growers, and one of the

most hardy varieties. “It ripens with Moore's Early, ahead of Worden; quality is good and it is a long keeper. Its long keeping and good shipping qualities are really marvelous and unequalled by any other variety, old or new, and I still believe that it is and will be the most profitable to grow. All I know and can influence I shall advise to plant and grow as many Campbell's Early as they possibly can. It is the best of all American grapes.”

Two year, No. 1, \$1.50 per doz.; \$9.00 per 100; \$80.00 per 1,000.

ASPARAGUS

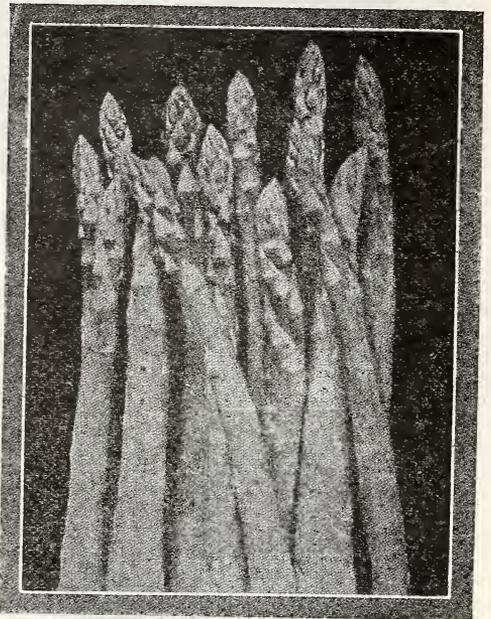

ASPARAGUS—A great many have made a failure of growing asparagus simply because they have grown it as a side line and have not given it proper attention. Asparagus will grow well in most any soil except low, damp ground, but the land must be under good cultivation and free from weeds. Mark the rows off 4½ feet apart, making the trenches in which the roots are set by plowing twice in the same furrow with a two-horse plow and then shoveling out the loose earth, making a trench about 10 inches deep with a smooth, flat surface. The plants are now placed in this trench at a distance of 12 to 18 inches apart, spreading the roots out flat. Then cover with two to three inches of soil, allowing the shoots to come up through, and get a foot or so in height before the trench is filled up level full. Or, if you wish, while you are hoeing during the summer to keep the weeds down, you can fill in the trench a little at a time until it is full. After the first good freeze, the tops will die down and should be cut off and burned, after which the bed should have a liberal covering of well-rotted manure, or, if you do not have that, in the spring you can apply some commercial fertilizer and harrow in well before growth starts.

We have three varieties that are grown largely here for the Chicago market and they are reliable.

CONOVER'S COLOSSAL—This good old variety is known everywhere; is of large size, rapid in growth and of good quality.

Price, large two-year-old plants, 25c per doz.; 50c per 100; \$4.00 per 1,000.

PALMETTO—A valuable new variety, and is planted very largely. It is larger than Conover, fully as early and the flavor is excellent.

Palmetto

Two-year-old plants, 25c per doz.; 50c per 100; \$4.00 per 1,000.

COLUMBIAN MAMMOTH WHITE—This variety is white and stays white as long as it is fit to use. As some markets demand a white variety, this is a very profitable one to grow in such cases. It is a very vigorous grower and very prolific.

Price, two-year-old plants, 25c per doz.; 50c per 100; \$4.00 per 1,000.

“Very nice plants.” In other words, KNIGHT'S PLANTS.

Gentlemen:—We received the last shipment of strawberry plants in fine condition. They are very nice plants indeed.
Fowler, Ind., May 5th, 1914.
Very truly yours,
THE FOWLER NURSERY.

One customer pleased makes more customers.

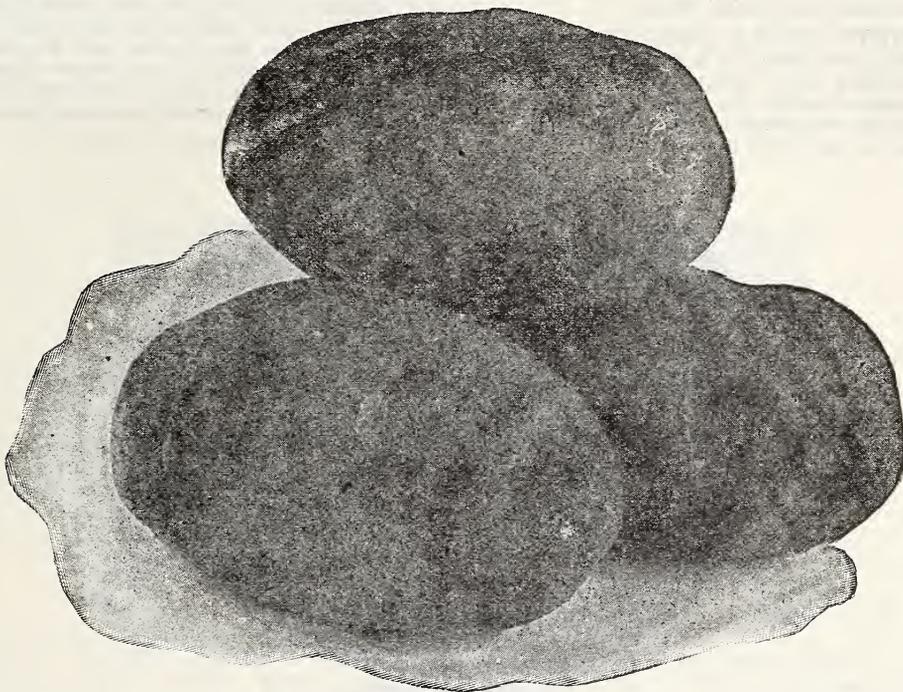

Dear Sirs:—I received my strawberry plants O. K. and am well pleased. And also others that had me send for them are pleased. One of my neighbors that got strawberry plants was so well satisfied that he wanted me to order for him as follows, —
Selma, Iowa, 4/30/14.
Very truly yours,
JNO. THOS. MORROW.

KNIGHT'S SEED POTATOES

Your best assurance of getting a good crop of potatoes this season is to use KNIGHT'S HARDY NORTHERN-GROWN STOCK. However, don't delay ordering, for while we have a good supply the demand on us every season is so great that the late comers are usually disappointed. Of the many varieties claiming public favor we are listing only five, but these five are the very best in cultivation, and you can be assured of success with any one or all of them.

Note.—If your order of potatoes is shipped early, when there is any danger of freezing whatever, we will pack in paper lined boxes or barrels free of charge.

Knight's Rural New Yorker No. 2

KNIGHT'S RURAL NEW YORKER NO. 2

—This is one of the largest yielding varieties known. It is very large and unusually smooth. The flesh, like the skin, is white, and of a very fine quality. It has very few and shallow eyes. The season is medium late. We know of no potato that presents a more handsome appearance than the Rural New Yorker, and while it is an immense cropper, it grows but few and small vines. It is one of the hardiest varieties we have and will not become scabby or spotted by being over-fertilized. It will stand an immense amount of dry weather and still produce a good crop. Ordinarily yields 300 to 400 bushels per acre, and if heavily manured, yield can be materially increased. We had a very fine crop last summer, and are in a position to supply you in whatever quantities you may desire.

Price, peck, 35c; bushel, \$1.00.

KNIGHT'S BEAUTY OF HEBRON — A

grand old reliable potato that is largely grown and well and favorably known all over the country. A great many will not grow any other variety on account of its exceptionally good quality. They are not as early as the Ohio, but would be classed as medium early. However, they have all of the good qualities of the late varieties. Plant them early for an early crop and later for a late crop, and you will never find anything to please you better. The Beauty of Hebron is strictly a commercial potato. You can find them quoted in all of the large markets, where they are sold principally by the carload. Here in Michigan they are one of the principal commercial varieties and the growers here are certainly well versed as to the biggest money makers.

Price, peck, 35c; bushel, \$1.00.

KNIGHT'S POTATOES—Continued

KNIGHT'S IRISH COBBLER—A new and exceptionally fine extra early variety. It is grown very extensively for market purposes and is probably coming into public favor more rapidly than any other sort. The tubers are large and very handsome, almost round and very uniform in shape and size. The flesh is white and of exceptionally good flavor and quality. It is a very heavy yielder and can always be depended upon for a crop. The eyes are strong, well developed, and slightly indented. Don't fail to get a supply of this grand new variety.

Price, peck 40c; bushel \$1.25.

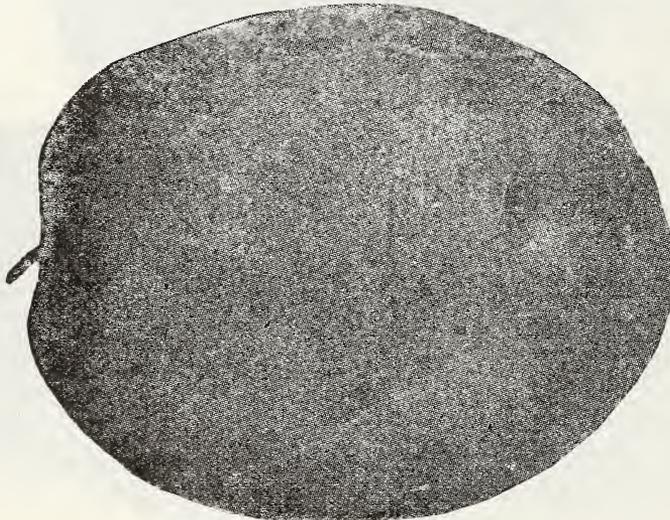

KNIGHT'S EARLY OHIO—This variety has been grown here for a number of years as the standard early potato, and probably no other early variety has been such a general favorite for so many years as this one. It has been so generally grown all over the coun-

try and everyone who grows potatoes is so familiar with it that we do not deem it necessary to describe it further, only to remind you that Early Ohio seed potatoes grown here in Michigan are superior. Whatever you do, get Northern-grown seed.

Price, peck 40c; bushel \$1.25.

KNIGHT'S MARK HANNA—This is a wonderful new potato, much resembling the Rural New Yorker, although it is claimed by some of our growers that they will outyield that grand old variety. It has a smooth white skin, quality is unexcelled, and there is not a variety that runs more uniform in size. The Mark Hanna has been grown here for two or three years and some of our largest growers are now using it for their main crop. Don't fail to get a supply of this valuable new sort.

Price, peck, 40c; bushel, \$1.25.

Knight's Irish Cobbler

A Kansas Customer So Well Pleased That He Wants More.

White Cloud, Kans., April 29th, 1914.

Dear Sirs:—Received the strawberry plants and was well pleased with them and wish to order 1,000 more of the Gibson. Please send order promptly.

THOMAS TAYLOR.

KNIGHT'S PLANTS Please Another Indiana Customer.

Newberry, Ind., 4/29/14.

Gentlemen:—Received berry plants all right and can say they were fine plants and in good condition.

Yours truly,

W. M. WESNER.

KNIGHT'S PLANTS Please Ohio Customer.

Logan, Ohio, 4/16/14.

Dear Sirs:—The plants I got from you are doing fine and I want to try some more as order enclosed.

Yours truly,

AUGUSTINE PALMER.

Another Boost for the Gibson—They Are Deserving of It.

Sabetha, Kans., 2/9/14.

Dear Sirs:—Your catalog came O. K. I wish to say that my Gibson plants I got from you last year went through drouth all right and I will be in the market for a few thousand in 1915.

Yours truly,

J. S. HENDRIE.

KNIGHT'S Poultry Pleased Also.

Meenasha, Wis., March 8th, 1914.

Dear Sirs:—The poultry arrived in good condition and I admit satisfaction.

Very truly yours,

W. C. ROSENOW.

Pennsylvania Customer Entirely Satisfied.

Monroeton, Pa., 4/8/14.

Dear Sirs:—What can you do on the following list of plants? The berry plants purchased from you last year have given entire satisfaction.

Yours respectfully,

H. H. NORTHRUP.

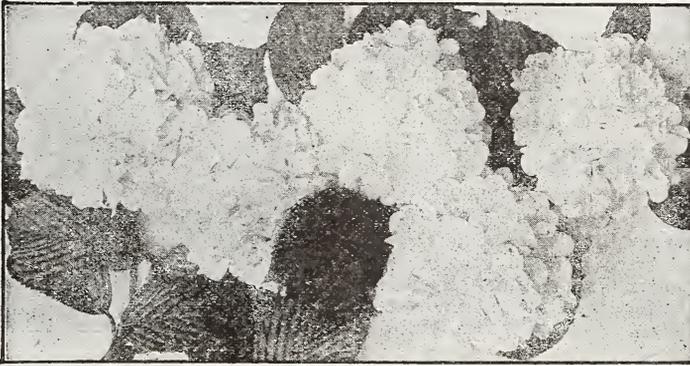

Shrubs that Bloom and Climbing Vines

Our customers of late years are becoming more prosperous. Berry growers are making money, and one of the results of this is that hundreds of them want to improve their home surroundings. It is a mighty hard matter for a person to select shrubbery suitable to their home planting from a catalog filled with long botanical names, and every season we get letter after letter asking if we cannot supply some good flowering shrubs such as are best adapted for country homes. For that reason we have prepared the following list of Shrubs and Vines, all of which we know from personal experience to be hardy and particularly adapted to beautifying any grounds. We have excellent plants to fill all orders, and the descriptions will tell you what each kind is like and what it is good for. You really should not fail to order liberally of this stock, for there is no way in which a few dollars can be spent as satisfactorily and bring as much pleasure to yourself and your family as beautifying the home and making it a more attractive place in which to live. And again, if you should ever wish to sell your property it will attract buyers much more quickly and you will get a great deal more for it than your neighbor, for instance, who would not spend a small amount of time and money to make his home grounds attractive.

We would like to see all of our customers order a good supply of these Shrubs and Vines this season, for we know from personal experience the pleasure and satisfaction there is in growing them.

SHRUBS

White Double-Flowering Snowball.

WHITE DOUBLE-FLOWERING SNOWBALL—A perfectly hardy shrub, with immense globular flowers borne in clusters. Very showy and handsome. You probably all know this as it is an old-time favorite. Plant several bushes singly.

Strong bushes, 2 to 3 feet, 25c.

HIGHBUSH CRANBERRY—Grows 8 to 10 feet tall. Vase shaped. White flowers in flat-topped clusters in June, followed by showy scarlet berries that hang on all winter. Splendid for planting singly or in groups or hedges.

Strong bushes, 2 to 3 feet, 25c.

ALTHEA (Rose of Sharon)—One of the most valuable of tall, hardy shrubs on account of their late season of blooming, which is from August to October, a season when but few shrubs are in blossom. Excellent for either hedge or specimen plants.

Strong bush plants, assorted varieties, 2 to 3 feet, 25c.

SPIREA VAN HOUTEII (Bridal Wreath)—A large shrub, which produces immense numbers of white flowers late in spring. The leaves are deep green, branches arch outward and are 5 to 6 feet long. Plant half a dozen specimens close to the house.

Strong bush plants, 2 to 3 feet, 25c.

SPIREA ANTHONY WATERER—A valuable variety of bright crimson color. It is of dwarf, dense growth, never exceeding 30 inches in height. Continues in bloom all during the summer and fall. For a splendid showy effect plant in masses of a dozen or more.

Strong bush plants, 6 to 9 inches, 25c.

OLD-FASHIONED PURPLE LILAC—Everyone knows what a lilac is, but not enough people have them in their yards. Their good points are extreme hardiness, very early blooming, and wonderful fragrance.

Strong bush plants, 2 to 3 feet, 25c.

A Tennessee customer says **KNIGHT'S PLANTS** are the best rooted he has ever seen.

Gentlemen:—The plants arrived in good order and the strawberries were the finest and best rooted I have ever seen.

Winchester, Tenn., 5/2/14.

Yours truly,
F. A. PATTIE.

WEIGELIA, EVE RATHKE—The finest Weigelia grown. It is remarkably free-blooming and flowers continually throughout the summer and autumn. Blossoms are trumpet-shaped, of a beautiful ruby carmine. For foundation or specimen planting there is nothing better.

Strong bush plants, 2 to 3 feet, 35c.

GOLDEN ELDER—Of value more particularly on account of its foliage, which is of a beautiful golden yellow color and makes a fine contrast among shrubs with a green foliage. Don't fail to include some of the Golden Elder in your order.

Strong bush plants, 2 to 3 feet, 25c.

SYRINGA or MOCK ORANGE—Almost as fragrant as Lilac. Literally covered with branches and the branches with white flowers in little clusters. The bushes grow from 4 to 6 feet high. They are splendid in groups of a dozen or so, and in some localities are used exclusively for hedges.

Strong bush plants, 2 to 3 feet, 25c.

WHITE LILAC—This is a form of common lilac that produces all white blossoms and single where the others are sometimes double. Lilacs, both purple and white, make excellent hedges or specimen plants and will grow to a height of 8 to 10 feet in good soil.

Strong bush plants, 2 to 3 feet, 25c.

VINES

BOSTON IVY—The old, reliable climbing vine for the North. It has glossy leaves overlapping each other, and its long shoots stretch up the walls with such a rapid growth that they reach the roof in a short time. In planting Boston Ivy the plants, if still in a dormant condition, should be cut back to within 6 inches of the ground.

Strong 2-year plants, 25c.

JAPAN HONEYSUCKLE—A nearly ever-green vine of good growth and with yellowish white flowers. Deliciously fragrant.

Strong 2-year plants, 25c.

MATRIMONY VINE—A very ornamental climber, which is capable of adapting itself to any condition. It makes a very strong growth and produces small purplish flowers in summer, followed by a large crop of scarlet berries, which remain on the vines until late in the winter.

Strong, 2-year plants, 25c.

California Is Not Too Far Away for KNIGHT'S PLANTS to Travel.

Sacramento, Calif., 4/24/14.

Dear Sirs:—The dewberry and raspberry plants, although a small shipment, arrived today in excellent shape after their long trip. They are strong and healthy looking with an abundance of roots, and if I need more will give you my order.

Yours respectfully,
GLENN L. WILSON.

A Kentucky Customer Comes Again.

Mt. Sterling, Ky., 5/23/14.

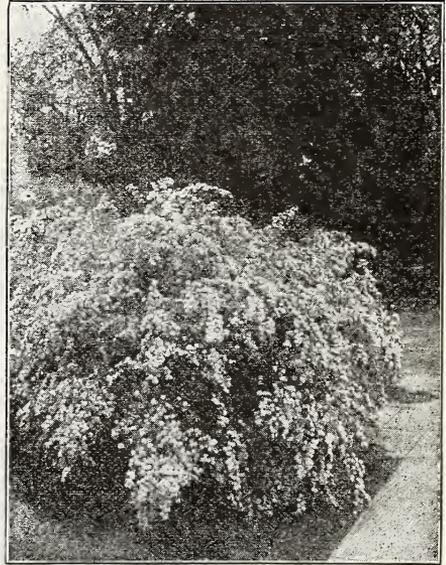

Dear Sirs:—Please ship at once the plants listed above. I was very much pleased with the plants I received of you three years ago.

Yours very truly,
WM. S. HOWELL.

In the testimonial letters appearing throughout this catalog, you will notice that we have given names and addresses. Write them if you wish to know further what success they have had with

KNIGHT'S FRUIT PLANTS

The testimonial letters are all unsolicited. Read them.

Spirea Van Houtell.

HEDGE PLANTS

CALIFORNIA PRIVET—This is easily the most popular of all ornamental hedge plants, and more of it is used than all others combined. Its foliage, which remains on the plant nearly all winter, is a rich, dark green. It is a strong grower and will succeed, even under the dense shade of trees, where other plants would not exist. Plants should be set from 10 to 12 inches apart in the row and pruned back severely the first two seasons.

Strong plants, 2 to 3 feet, 8c; \$6.00 per 100.

BERBERIS THUNBERGII—For a low dwarf hedge and for planting around foundations in front of larger shrubbery, nothing equals this beautiful Barberry. It is of spreading habit, growing very thick right from the base, and requires but little trimming. The leaves are small, light green, turning to brilliant colors toward fall. It is absolutely hardy in all parts of the country, and should not be left out of your shrubbery list.

Strong plants, 12 to 18 inches, 20c; \$2.00 per dozen; \$15.00 per 100.

THE HEN FOR PROFIT

It will pay you to improve your flock by getting some of our White Wyandotte eggs. We make a specialty of the White Wyandotte, which are of the Dustin Strain, acknowledged as being the best strain of layers known.

We are proud of our beautiful flock of White Wyandottes and you can have one to be just as proud of.

Price of eggs, \$1.50 for 15. \$2.50 for 30.

We have also a few fine cockerels and pullets to spare. Price on application.

For several years we have made a special offer to our patrons which has been the means of starting many fine flocks. This year the same offer appears below, but don't delay taking advantage of it, for we have never been able to supply our customers throughout the entire season.

SPECIAL PREMIUM OFFER

For every order of \$5.00 or more, at catalog price, accompanied by cash and sent to us on or before March 15th, we will give you one year's subscription to FRUIT GROWER AND FARMER, published in St. Joseph, Mo. This is one of the livest horticultural and farm papers in the country, and you should not be without it.

OR

For every order of \$3.00 or more, at catalog price, accompanied by cash and sent to us before March 15th, we will send you a setting of eggs at half price, 75c. If you will wish one of these premiums, kindly notify us when ordering plants.

A GOOD SPRAY PUMP
Earns Big Profits and Lasts for Years

THE ECLIPSE

is a good pump. As practical fruit growers, we were using common sprayers in our own orchards—found their defects, and invented the Eclipse. Its success forced us to manufacturing on a large scale. You take no chances. We have done all the experimenting.

We are placing in the market this season a light, compact power outfit, the price placing it within the reach of every class of growers. The efficiency is equal in every respect to our hand pump which has been tested thoroughly and proven successful.
